

*About
Centre for Rural Studies*

The Centre for Rural Studies (formerly Land Reforms Unit) of the Lal Bahadur Shastri National Academy of Administration was set up in the year 1989 by the Ministry of Rural Development, Government of India, with a multifaceted agenda that included among others, the concurrent evaluation of the ever-unfolding ground realities pertaining to the implementation of the Land Reforms and Poverty Alleviation Programmes in India. Sensitizing the officer trainees of the Indian Administrative Service in the process of evaluating of land reforms and poverty alleviation programmes by exposing them to the ground realities; setting up a forum for regular exchange of views on land reforms and poverty alleviation between academicians, administrators, activists and concerned citizens and creating awareness amongst the public about the various programmes initiated by the government of India through non-governmental organisations are also important objectives of the Centre for Rural Studies. A large number of books, reports related to land reforms, poverty alleviation programmes, rural Socio-economic problems etc. published both externally and internally bear testimony to the excellent research quality of the Centre.

GLOSSARY

Patta: ROR

Pattadar: Landowner

Tahsildar: Chief Revenue Officer for the Administration of a Tehsil

Village Administrative Officer (VAO): Village level revenue functionary in Tamil Nadu who collects revenue, makes crop entry and carries out functions as directed by the Tahsildar and District Collector.

Chitta: Chitta is an important land record, which provides information on name of the landowners based on patta number. Collection of individual pattas for the entire village is known Chitta book.

F-Line: Boundary Line

ACKNOWLEDGEMENTS

We wish to express our gratitude to all those who have cooperated in the completion of the study on “Evaluation of Computerization of Land Records in Tamil Nadu”. We express our sincere thanks to the Ministry of Rural Development, Deptt. of Land Resources, GoI for providing the financial assistance. Shri R. Gangadharan, IAS, Director, LBSNAA, and Shri Padamvir Singh, IAS, Joint Director-cum-Chairman, Centre for Rural Studies who have extended all sorts of support in the completion of this study. We are also thankful to Dr. M. Thangaraj, Dr. Ambedkar Centre for Economic Studies, Chennai who has not only organized field survey in Tamil Nadu but also drafted and finalized the study report. We are really indebted to him. Similarly, contribution made by Dr. A. P. Singh, the then Research Associate in Centre for Rural Studies has been immense and significant.

We are also thankful to Shri Ramesh Kothari, Shri Deepak Kumar, Shri S. S. Kharola, Shri Samar Kashyap and Shri Suresh Kumar for providing all secretarial and logistic support. We also extend our sincere thanks to Mr. P. Sivabharathi Raja, Mr. M. Ramesh Kumar, Mr. M. Ventatesan and Mr. K. Murali, Mr. S. Paul Pandian, Mr. P. Sathish Kumar,

Mr. K. N. Vijay Baskar, Mr. C. Prabu and Mr. Murugapillai for their help in data collection.

We also extend our thank to Special Commissioner and Director of Survey and Settlement, and Joint Director, Survey and Settlement, Survey Department, Government of Tamil Nadu, Assistant Director of Survey and Land Records, Vellore, Coimbatore, Thirunelveli and Thanjavur; Tehsildars of Arakkonam, Thirupathur, Avinashi, Pollachi, Thenkasi, Nanguneri, Pattukkottai and Thiruvidaimaruthur Taluks for providing all possible help in the completion of this study.

31 December, 07

Dr. Saroj Arora

Sh. H.C. Behera

Preface

Management of land records in our country goes back to Mogul period. Considering the nature of work, collection and retrieval of Land Record data has been a difficult exercise for Revenue Establishment. With advent of technology and computerisation of the records, there has been significant improvement in Land Record Management.

The Tamil Nadu Info System on Land Administration and Management (TAMIL NILAM) project was introduced with the objective of computerizing land records data and to do away with manual operation of land records management for providing benefit to the public. This initiative could be possible with the technical and financial assistance from GOI. The objectives of using ICT has been online and continuous updation of land data, secure, error free, and up-to-date data for reducing land related litigations, easy access, retrieval and utility of land records information, prompt issuance of land records to the public, etc. It is also one of the objectives of the programme to lead progressive capacity building of the personnel to bring in attitudinal changes.

Broadly, the entire programme has been developed with vision to provide utmost service support to the farmers and the revenue officials concerned. The Centre for Rural Studies has taken the task of evaluating the computerized land record programme. It has also tried to bring forward the achievements and limitations of the programme in the state of Tamil Nadu. The report shows that the state has done a commendable job in issuance of record of rights to the farmers. As far as the awareness of the computerized programme in the state is concerned, the revenue administration

has done quite substantive work to create awareness among the people in village and Taluk levels. The programme has helped the Revenue Officials not only in timely issuance of Record of Rights (RoRs), and updation/ mutation of land records but also in reducing the land related disputes. The integration of other information like old age pension certificates, birth and death certificates, details about the welfare programmes, etc and use of Touch Screen Computer Kiosk (TSCK), is an additional advantage to the people at large.

The programme will not be effective until there is complete online mutation, and computerization of Adangal, the register for crop details. Again, the problem with the delivery mechanism of the program is that the two associated departments such as Taluk office and Sub Registrar office are working separately, which cause difficulties to the officials and landholders and delaying of the process of land record management. Therefore, close linking between the two important departments such as Taluk and Sub Registrar Office is essential in order to further minimize the difficulties faced by the officials and landholders as well. At present, the Government of Tamil Nadu is under the process of close linking these two important departments towards further downsizing the difficulties in management of land related information. The concern in many states with regard to Computerisation of Land Records (CoLR) is the digitization of cadastral maps. So far, the maps do not reflect the real picture. The CoLR software is having various standalone modules and there is no adequate steps taken to provide online mutation and automatic updation of ROR. Thus, it is essential to introduce these services in the district and Taluk offices for an effective management of computerized programme.

Overall, CoLR is to a large extent, providing remedy for the multiple problems of land records. The current trend of the programme in Tamil Nadu shows that very soon the Government will be able to take up necessary steps towards removing the existing gaps. I thank Prof. M. Thangaraj of Dr Ambedkar Centre for Economic Studies, University of Madras for his efforts to complete this report.

Yatendra Kumar
Deputy Director &
Coordinator cum Vice Chairman
Centre for Rural Studies

Chapter - I

INTRODUCTION

Ministry of Rural Development, Government of India initiated Computerization of Land Records (CoLR) in 1988-89 as Centrally Sponsored Scheme with 100 per cent financial assistance to States. CoLR is an Information Technology (IT) based system evolved to remove the flaws in the maintenance and updating of land records. The major objective of IT based technology is to bring about transparency and easy accessibility of land records. National Informatics Centre (NIC) provides infrastructure and network facilities. NIC also provides training to the Revenue Officials on the application of the software. For effective land administration, planning and empowering the people with the right to information about the details of various types of land, a computerized system of land records is very crucial. Detailed and updated information in an efficient retrieval mode is required for this purpose.

CoLR is a process of modernizing of data collection, storage, retrieval and processing facilities in respect of land related data, which was traditionally collected by land revenue administration. CoLR has been designed to provide accurate information readily available to users at the nominal cost and enable better use of collected data for meaningful analysis and decision-making. This scheme of Computerization of Land Records is the first successful implementation of e-governance at grass root level where people will be directly benefited and this digital data will be very useful for planning and execution of Government programmes.

Maintenance and updating of land records in rural India assume importance, as majority of the population in India is depending on land for their survival either as the owner or tenant. History of maintaining systematic records on land for revenue purpose goes back to a century and a quarter. Maintenance of land records by the revenue department had posed a serious problem about the title of the landowners and the size of the land owned, which led to several legal problems in rural areas. The demand for computerization of land records has emerged from the conference of Revenue Minister's of State in the year 1985. The other advantage of computerization of land records is to eliminate the human error that may creep into manually operated certificate of land ownership. CoLR has been prime activity of the Ministry of Rural Development, Government of India since 1989. Now, Tamil Nadu has completed computerization of land records in 201 Taluks from out of 206 Taluks. In this context it becomes important to undertake a scientific study to understand the impact of computerization of land records and the extent the computerization of land records benefit the rural population.

Background of Land Records in Tamil Nadu

‘The earliest record of a cadastral survey in India was instituted about thousand years ago by Raja Raja Chola I of Thanjavur dated 985-1011 A.D. The necessity for the maintenance of boundary marks and survey records was conceived in the year 1864 and it took three decades to evolve certain practical steps. All the Karnams (Village Accountants) had been put through a course of instruction in survey in 1895’. A systematic record on land was created and published during the last quarter of 19th Century. Survey and Settlement Record (SSR) was the first record at the village level published by the British Government under the Madras Presidency. This record was reprinted once in

thirty years after conducting the resurvey. Reprinted land record was known as Re-survey and Settlement Record (RSR). This was not further updated even by the British Government in India and even during the post Independence period up to the early 1980s. It should be noted that the British Government in India was not genuinely interested in bringing out the land records, but they were interested in generating revenue for the government. The area/villages, which were under the Zaminadari/Inamdari tenure, was first surveyed and the land record was published only after the abolition of Zamindari/Inamdari Tenure in 1960. It should be noted that Zamindars/Inamdars were also not genuinely interested in maintaining land records, as they were interested in generating revenue from the land.

Types of Land Records

1. SSR/RSR: The SSR/RSR is an important land record, which provides information based on survey number. The SSR/RSR is known as A-Register. The SSR/RSR provides the following information 1. Survey number, 2. Sub-division number, 3. Government/private land, 4. Type of tenure, 5. Irrigated/unirrigated land, 6. Name of the land owner, 7. Land revenue, etc.

2. Adangal: Adangal (Crop Account) is another important land record, which provides information based on survey number. Data relating to 1. Crops 2. Encroachments of common lands 3. Name of the landowner and tenant, etc are available in this records. After computerization of land records, data on any information i.e. name of the pattadar (landowner) and land owned by him is available with the computer. Adangal record is being prepared every year by the VAO. The latest Adangal is available with VAO. Whenever a new Adangal is created, the previous

Adangal is being deposited with the Tahsildar's Office. It was stated that data entry for Adangal record under computerization of land records has been completed and the validation data is being done now.

3. Chitta: Chitta is another important record, which provides information on name of the landowners based on patta number. Collection of individual pattas for the entire village is known Chitta book. The VAO is used to compile another set when he does not have space in the Chitta book to mark the mutation before the introduction of CoLR. Number of parcel per holding and the area of land owned are available in this record. Any change in the land ownership whether sale, purchase, partition or settlement was being carried in this record.

4. Record of Tenancy Rights (RTR): RTR is another important land record which was created under The Tamil Nadu Agricultural Lands Record of Tenancy Rights Act 1969. The record provides information on 1. Survey number, 2. Classification – wet or dry, 3. Name and address of the landowner, 4. Name and address of the tenant cultivating the land, 5. Name and address of the intermediary, if any, 6. Area under tenancy, etc.

5. Field Measurement Book (FMB): FMB is a collection of individual survey number maps. All sub-divisions in the survey number are shown in the FMB. It also gives dimensions of each field boundaries.

6. Village Map: Village map provides all special information relating the village. Information such as, street layout, temple, public utilities like thrashing floors, grazing land, porambokku

lands, canals, tanks, etc are all could be seen with the help of village map.

7. Patta Pass Book: The Tamil Nadu Patta Pass Book Act, 1983, ensures issue of Patta Pass Book to all agricultural landholders in Tamil Nadu. Issue of patta pass book to holders of agricultural land scheme was introduced in Vellore, Thanjavur, Karur, Perambalur, Thiruchirappalli, Coimbatore, Theni, Madurai and Thoothukudi districts and patta pass books issued to all pattadars. The Government have sanctioned a sum of Rs. 18.93 crores for the remaining districts to issue computerized patta pass books and released a sum of Rs. 10.00 lakhs for printing of patta pass books. However, under the Computerisation of Land Records (Tamil NILAM) programme the 'A' Register and 10 (i) chitta were computerized. The computerized land records have facilitated issue of authenticated patta extracts instantly. Thus the Computerisation of Land Records Programme has contained all the advantages of the patta passbook scheme. In the patta pass book scheme the data is static, whereas the Computerisation of Land Records programme provides dynamic data, which is constantly updated. Hence, the patta passbook scheme is being reviewed. When we visited the Taluk office during the data collection, we observed that a few farmers were carrying patta passbook to indicate their patta number to the KRP at the time of getting the computerized patta.

Government of Tamil Nadu GO on Land Records

The government of Tamil Nadu enacted a G.O. (MS) NO.382 REVENUE DT. 03-09-2003 On-line service under centrally sponsored scheme of computerization of land records programme (CoLR) christened as Tamil NILAM project envisages on-line issue of computerized extract (ROR) of land records. Besides

issue of computerized extracts of land records, the Public can access information on details of old age pension/destitute pension, details of guideline value and obtain birth and death certificates, etc. The implementation of the scheme envisages of on-line mutation. It means that various types of mutations have to be carried out through Tamil NILAM software. Any mutation carried out by-passing Tamil NILAM will not be recognized by Tamil NILAM and computerized land records in printouts/hard copy issued without carrying out mutation on-line will show only the old and obsolete details. It will also provide room for tampering of records. The Government decided to ban issue of manual extract of land records and the use of hand written records in all Taluks in the State as and when the Taluks are brought on-line. The Government directed that any computerized land records, which have been modified, corrected manually would not be a valid document. Similarly photocopy of computerized land records also shall not be valid. The public is permitted to obtain fresh computerized extract of the record by payment of Rs. 20/- as user charge in replacement of the manual extract. The Tamil Nadu Government G.O. (MS) NO. 382 is given in Appendix 1.

Land Reforms in Tamil Nadu

The British Government in India and the Government of Tamil Nadu enacted several Acts on land reforms and the important Acts are given below.

The Madras Survey and Boundaries Act, 1860.

The Madras Survey and Boundaries Act, 1923

The Tamil Nadu Estates (Abolition and Conversion into Ryotwari) Act, 1948.

The Tamil Nadu Inam Estates (Abolition and Conversion into Ryotwari) Act, 1963.

The Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Act, 1961.

The Tamil Nadu Public Trusts (Regulation of Administration of Agricultural Land) Act, 1961.

The Tamil Nadu Agricultural Lands Record Tenancy Rights, 1969.

The Tamil Nadu Patta Pass Book Act, 1983.

Profile of the Study Area

An attempt is being made in this section to discuss the land-based information, such as distribution of operational holdings, area operated, land utilization, cropping pattern and area irrigated.

Landholdings and Area Operated in Tamil Nadu

Distribution of operational holdings and area operated as given in Tables 1.1 and 1.2 clearly explicates that the number of holdings and area operated was high among the marginal holdings i.e. up to one hectare as compared to all other size class of operational holdings. It is an accepted fact that in India majority of the holdings would have many parcels scattered in different places. It is a customary practice that each and every parcel of the land i.e., ancestral property was sub divided among all family members due to partition and sub division of land. Maintaining land record

manually for 78.59 lakh holdings with 69.72 lakh ha. of land and it is estimated that these 78.59 of lakh holding would have at least two crores of parcels if the average number of parcels per holding was 3 which is definitely a Herculean task.

Land Use Pattern in Tamil Nadu

Utilization of land is an index of the agricultural development. The data as shown in Table 1.3 clearly expounds that the net sown area was less than half of the total geographical area, which indicates that there is a vast scope for the extension of area under cultivation. The area under other follow lands was about 15.7 per cent, leaving the land uncultivated is not a healthy trend as these lands are cultivable lands.

Table - 1.3
Land Utilisation in Tamil Nadu

(area in ha.)

	Classification	2004-05
A	By Professional Survey	13026645
B	By Village Papers	13026645

Cropping Pattern

Cropping pattern refers to the area under different crops during a Fasli year. The gross cropped area i.e. total food and non-food crops under all crops have slightly increased to 6032718 ha. in 05-06 from 5889069 ha. in 04-05. Of the gross cropped area, the area under food crops accounted for 72.9 per cent and that of non-food crops formed 27.1 per cent only (Table 1.4).

Paddy, Cholan (Jowar), Cumbu (Bajra), Ragi, Millets, Pulses, Sugarcane and Other food crops constitute the total food crops. The area under food crops has increased by 171987 ha. i.e. 4.1 per cent in 05-06 over the previous year.

Cotton, Oilseeds, Tobacco, Fodder crops, Coffee and Other Miscellaneous crops constitutes non-food crops. The area under non-food crops has decreased by 28338 ha. i.e. 1.7 per cent in 05-06 over the previous year.

Table - 1.4
Area under Principal Crops (in ha.)

No	Crops	2005-06		2004-05	
		Area	%	Area	%
	I. Food Crops				
1.	Paddy	2050455	34.0	1872822	31.8
2.	Jowar (Cholan)	316274	5.2	376739	6.4
3.	Bajra (Cumbu)	81925	1.3	97608	1.7
4.	Ragi	99549	1.7	108845	1.8
5.	Other Millets	243197	4.0	240541	4.1
6.	Pulses	525237	8.7	590250	10.0
7.	Sugarcane	335397	5.6	222188	3.8
8.	Other food crops	746433	12.4	717487	12.2
	Total food crops	4398467	72.9	4226480	71.8
	Non-Food Crops				
9.	Cotton	109742	1.8	129364	2.2
10.	Groundnut	618835	10.3	615877	10.5
11.	Genjily	65118	1.1	72725	1.2
12.	Coconut	370515	6.2	357056	6.1
13.	Other Oil seeds	32944	0.5	33393	0.6
14.	Tobacco	5102	0.1	6049	0.1
15.	Fodder crops	207169	3.4	221294	3.8
16.	Coffee	31501	0.5	30683	0.5
17.	Other Non-food crops	193325	3.2	196148	3.3
	Total non-food crops	1634251	27.1	1662589	28.2
	Total Food & Non-Food Crops	6032718	100.0	5889069	100.0

Season and Crop Report 2005-06, Department of Economics and Statistics, Government of Tamil Nadu.

Area Irrigated

Distribution of net area irrigated by different sources as given in Table 1.5 clearly elucidates that the net area irrigated by different sources during 05-06 was 2919545 ha. as against 2637198 ha. in 04-05 showing an increase of 282347 ha. or 10.71 per cent over the previous year. Area under wells and tube wells has gone up in 2005-06 as compared to 2004-05. The net area irrigated during 05-06 constitutes 55.7 per cent of the net area sown in the state.

Table - 1.5
Net area irrigated by various sources

No	Sources	Net Area Irrigated			
		2005-06		2004-05	
		Area	%	Area	%
1	Canals (including System tanks)	800161	27.4	753819	28.6
2	Tanks	575352	19.7	465355	17.6
3	Wells	1536808	52.6	1400394	53.1
	a. Tube wells	381441	13.1	315629	12.0
	b. Open wells	1155367	39.5	1084765	41.1
4	Others	7224	0.3	17630	0.7
	Total	2919545	100	2637198	100

Season and Crop Report, 2005-06, Department of Economics and Statistics, Government of Tamil Nadu.

Consequences of Poor Land Records

Manual system of maintenance and updating of land records system in a distorted social structure has many flaws. These problems have been listed in various documents and other writings, which include the following:

1. Non -recognition of Rights

Land records specify, delineate, record and maintain the rights of individuals, families, groups and communities as well as of the state in respect of particular land. These rights are important as our legal system gives preference to documentary evidence in any process of adjudication. Where the land rights are not recorded they are difficult to enforce. In order to protect the rights, it is necessary that they be recorded first. Some states for instance recognize tenancy as a practice while others do not. However, the rights of the tenants can only be respected when they are recorded in the Record of Tenancy Rights (RTR). Therefore, non-recognition of rights is the first of the consequences that flows out of a poorly maintained records system.

2. Difficult of Retrieval

Land records contain useful data for planning and other administrative purposes. They form the basis of planning exercises, policy formulation, subsidy distribution and relief at the time of natural calamities, drought and floods and creation of sources of irrigation etc. Therefore, one of the foremost facilitating qualities of data is that it should be readily retrievable and convertible into intelligible sets of information. To retrieve data from our manual system of revenue records is quite difficult. It is also almost impossible to collate, analyze and otherwise use this potentially useful data.

3. Failure of Land Reforms

It has been almost axiomatically accepted that poor land records have led to the failure of Land Reforms. P.S. Appu, an expert on

the subject of land reforms classifies the record keeping deficiencies into two groups, where records system exist but no recording is done; and where there is no records system. Both have been equally instrumental in poor implementation Land Reform of Legislation, particularly in the context of tenancy reforms. Similarly, the ceiling on landholdings Act functions within a four-fold paradigm of land records, revenue functionaries, quasi-judicial action and distribution to the beneficiaries. The circuit of this paradigm would remain incomplete till land records do not provide a support base to the ceiling operations. It is therefore not unjustified to hold that an imperfect record system has been a factor in the failure of the Government to implement Land Reforms in the country.

4. Rent Seeking

Rent seeking has emerged a major behavioural phenomenon in the post independence India. The management of land records is an exclusive revenue function. It, therefore, constitutes a monopoly function for which it charges an exorbitant rent. The farmers found difficulty in obtaining a copy of the land records because the Village Administrative Officer demanded a sizable amount of money as bribe. It is noted that the delay in obtaining patta (Record of Rights) from Village Administrative Officer, made the crop loan process prone to delay and resulted in the harassment of farmers. It is also found that the difficulty in obtaining records from VAO, which led to long delays in disposing land and land related civil litigation.

5. Violence in the Rural Society

The post independence Indian society has witnessed a spurt in both organized and individual violence. There has also been a

growth in the land based or other forms of social movements in which violence has been institutionalized. There are a host of factors for the rise of such movements. However, the skewed distribution of land ownership has also been one of the principal reasons for the increase in violence and violent movements. States where land reform legislations have not been implemented, it has been invariably found that land issues provide the core of contention. Computerization of land records may create the environment by facilitating both information flow and promoting more equitable land relations.

6. Erosion of Government Land

Poor or partial maintenance of land records has led to the erosion of the corpus of government land. The corpus of government land was, substantial at one point of time, has been used up contrary to the state recognized principle of distribution. Computerized records system alone can arrest this erosion. However, it has been projected as an important link in the upkeep of government lands and their utilization in favour of the weaker sections or for other purposes.

7. Uncertain Conveyance

Easy conveyance is one of the features of a near perfect land market. Uncertainties in conveyance add to the search cost and, therefore, lead to market distortions. It is not possible to have easy conveyance under conditions of an imperfectly maintained records system. This denotes a higher search cost upon all transactions. The markets can only deliver under conditions of perfect information flow and not under the existing situation of an incorrect set of record-of-rights. Computerization of land

records would help in enhancing information flow and thus bring about efficiency in land market transactions.

8. Unreal Planning

Any planning exercise begins with the question "planning for whom". The focus of all planning exercise is to empower the poor including the small and the marginal farmers. Now that grassroots planning and 'planning from below' have become accepted as an authentic planning methodologies. Any planning without taking the micro data or the projections of the same at the national level will be unrealistic. Under the manual system of land records, the record of rights is not capable of projecting analyzed data as planning aids.

9. Availability of Loans.

Land is a resource capable of conversion into liquid assets; it enables an owner to get loans for productivity purposes. For want of proper records, it becomes difficult to raise loans both from institutional or private sources. Even where loans are availed of, the rate of interest from the private sources or the terms of lending are extremely high. To borrow from institutional sources, the borrower has to spend greater time in running around.

Chapter - II

TAMIL NADU INFOSYSTEM ON LAND ADMINISTRATION AND MANAGEMENT (TAMIL NILAM¹)

The Centrally Sponsored Scheme on Computerization of Land Records was started in 1988-89 with 100 per cent financial assistance as a pilot project in eight districts in the country. During Eighth Five Year Plan, the scheme was approved as a separate Centrally Sponsored Scheme. Computerization of Land Records programme is being implemented in Tamil Nadu with 100 per cent financial assistance from Government of India under the Centrally Sponsored Scheme. 'A' Register and 'Chitta' have been computerized in 201 Taluks.

Tamil NILAM (Tamil Nadu Info system on Land Administration and Management) software is created by NIC, Tamil Nadu to operationalize the computerization of land records in Tamil Nadu. Tamil NILAM software is being used in all Taluks not only to issue computerized patta (RoR) and A – Register, but also several welfare programmes like Old Age Pension, Birth Certificate, community Certificate, etc are being shown.

Ban on issue of manual extract of land records has been notified in the State Gazette and computerized land records are only valid in the State. Out of 206 Taluks in the State, 201 Taluks have come on line. Rest of the five Taluks could not come under on

¹ Information for this section was collected from Survey Department and web sites of the NIC and Government of Tamil Nadu

line, as these five Taluks are in Chennai city i.e. urban. As on 13th June 2007, total number of Touch Screen Computer Kiosk (TSCK) viewers was 11,06,116 persons and 90,28,392 persons have availed of the computerized extracts of land records.

For effective land administration, planning and empowering the people with the right to information about their land details, a computerized system of land records is very crucial. Detailed and updated information in an efficient retrieval mode is required for this purpose.

A pilot project was taken up in 1991-1992 in Salem district of Tamil Nadu. With the experience gained, the programme was extended to the remaining districts in a phased manner during the years 1994-1998. An extensive programme of training to the revenue personnel who would be involved in operation of the computer system was taken up. In the transition period, before going to fully on line, it was decided to have both the manual system and computer system to run parallel. After gaining full confidence, the system was switched over to completely on line and the manual system of issuing patta was given up.

It was not enough just to have the system on line, i.e. all changes in the land records being carried out through the computer only. It was also necessary to change the procedures to take care of the change of environment. Training was imparted to the operative persons in making them familiar with the new system. It was also felt necessary to give a legal and administrative sanctity to the records now being maintained only in the computer. Accordingly, a notification was issued by the Government making computerized extracts of land ownership document is the only valid document and manual extracts were banned.

Features of Tamil NILAM

Tamil NILAM has the following innovative characteristics:

1. (i) For the first time in the country, the citizen interface for the land records was introduced. This was done by providing Touch Screen Computer Kiosks (TSCK) in the Taluk offices spread through out the State.

(ii) Land ownership records for all the villages in the Taluks have been made available for display to the public in the TSCK. Apart from providing an easy way of checking up of land ownership details, the CoLR has also introduced transparency in the Government records as any person can view ownership data of any land situated with in the Taluk. The chances of fraudulent land transaction have been substantially reduced by the introduction of the CoLR.

(iii) An element of self-sustainability for maintenance and cost of consumables has been built into the system. A viewer ship charge of Rs.2.00 for five minutes and a charge of Rs.20/- for getting an extract are being levied.

2. (i) All lands sales are now being recorded in the computers available in the Sub Registrars' Office. This has made the task of getting Encumbrance Certificate much easier for the citizens.

(ii) There are two aspects to the land transactions, namely, getting the document registered while the purchase is made, and secondly, getting the changes done in the land records data base in the Taluk Offices. The first activity is carried out in the Sub-Registrars' Office and the second in the Taluk Offices.

3. (i) Apart from the landholding data, some times village maps are required by the public for their use. These maps have been traditionally stored in paper rolls in a haphazard fashion. Retrieval and sale of maps on demand used to take several days, which led to substantial harassment to the citizens. A project to scan the village maps is under progress.

Touch Screen Computer Kiosks (TSCK)

The new initiative of the TSCK has introduced transparency, user friendliness and eliminated the red-tapism, saved the public from unscrupulous middle-man and corrupt elements. Marked by the success of this project and ever increasing use of it by the public, Government now have initiated action to install TSCK in all Taluks in the State.

Services Offered Through Touch Screen Computer Kiosks

The public will be able to avail the following the services:

- Information on land matters with survey and sub-division numbers and obtain extracts. Birth and death certificates can be seen and copies may be obtained.
- Information on old age pension/destitute pension, approval status of new requests and validity status of old pensions
- Guide line value of land
- Details on welfare schemes of Revenue Department for availing of the services & benefits of the schemes
- Distress Relief Scheme (DRS) Approval / Seniority Status
- Land Transaction Status
- Electoral Roll data for the constituency

The software for Tamil NILAM and TSCK interface has been developed by National Informatics Centre (NIC) of Tamil Nadu, as per the requirements of Revenue Department and Survey & Settlements Department of Government of Tamil Nadu. The hardware procurement and installation has been done by ELCOT, an undertaking of Government of Tamil Nadu

Features

1. Total interface is in Tamil (Local Language)
2. Voice messages for guiding the new users
3. User friendly buttons and number pads for entry
4. TSCK has a coin acceptance unit; the usage is possible only on putting coins
5. Display of current data from Taluk Server accessible through the LAN

CollabLand

CollabLand is a Java based Field Measurement Book (FMB) Map Drawing Software developed by National Informatics Centre. CollabLand uses open standards to achieve inter application operability. CollabLand has been developed using Open Domain Development Tool Sets, Libraries and Software Packages: It uses PostgreSQL Database. Collabland is implemented in Perambalur and Pudukkottai Taluks on pilot basis. The software has been approved for implementation in the entire State.

Features of the CollabLand

- Create FMB Maps using Ladder Data
- Viewing/Printing FMB extracts as a Citizen Service

- Perform transactions like sub-division, merging
- Mosaicing of FMB maps to create village boundaries
- Provide integrated solution with non-spatial data

Digitization of Field Measurement Sketches (FMS)

Digitization of Field Measurement Sketches (FMS) programme envisages:

- (a) Digitization of field measurement sketches and creation of GIS.
- (b) Introduction of GPS and Total station to modernize Land survey.

With the financial assistance from Government of India, FMS and Village Maps have been digitized on a pilot basis in four Taluks viz, Chingleput, Kodavasal, Gobichettipalayam and Erode at a cost of Rs.124.36 lakhs. Around 1.22 lakh FMBs have been digitized in these Taluks. A committee was formed to evaluate the software specifications adopted in these two pilot projects, and the committee recommended a common software specification that could be adopted for the entire state. When fully implemented, it will ensure accuracy, clarity, easy access, retrieval and utilization. This will virtually render land related litigation a thing of the past.

C-STAR

Government of Tamil Nadu in collaboration with Anna University has established a modern Survey Training Institute called Center for Survey Training and Research (C-STAR). The objectives of the Training Institute are:

- To carry out training, research and developmental activities in the areas of cadastral survey and related fields.
- To impart training to personnel of Survey and Land Records Department (SLRD)
- Guiding SLRD in the process of modernization.

The Government have accorded sanction for establishment of the institute in the premises of the Anna University. The high-tech institute is to be managed by an "Executive Council" in which the Vice Chancellor of Anna University will be the Chairman besides 7 members, 4 from the Government and three from Anna University. The Executive Committee have ordered for appointment of a Director for C-STAR from Anna University and a Professor has already been appointed from Anna University as Director. Under the centrally sponsored scheme of Strengthening of Revenue Administration and Updating of Land Records, Government of India and Government of Tamil Nadu have accorded sanction for RS.250.00 lakhs on 50:50 basis.

Data warehousing

The Land Records data for the entire State loaded on SAN Server at NIC. The database has 3.4 crores records of A- Register details and 2.5 crores records of Chitta details. A Web based query facility on this data has been developed and demonstrated to SC&DEOSS. NIC has developed a Data transfer utility to transfer the daily transaction data from Taluks to Central server at Chennai through Internet

Computerisation of Adangal (cultivation data): This data is more dynamic than the other land data now available.

Computerization of cultivation data is now in progress and is expected to be completed shortly.

Security aspects: Considering the nature of land data, it is necessary to have the best possible security. While at present security is provided by using password for access into the database, it is proposed to further strengthen this aspect. For this purpose, it is proposed to take up implementation of digital signatures under a Public Key Infrastructure (PKI).

Taluk Office-Sub Registrar Office Connectivity

1. Government has decided to interconnect Taluk Offices with Sub Registrar Offices
2. The main objective is to reduce the time delays involved in transferring the changes from one office to other
3. In the first phase, Taluk and SR Offices which are in the same campus have been interconnected
4. Sub Registrar Office can view the land details for any Survey Number and Sub Division number before registration
5. Taluk Office can view the details of Registration and initiate patta transfer process

1. Systems available at Taluk

1. One Server Computer
2. Two Client Computers
3. One Dot Matrix Printer
4. UPS
5. Touch Screen Kiosks (at 127 Taluks)
6. Laser Printer (at 127 Taluks)
7. Finger Print Reader (at Model Taluks)

2. Applications Systems at Taluks Land Records

- ✓ Petitions Monitoring System
- ✓ Old Age Pension Management System
- ✓ Certificate Management System
- ✓ Payroll
- ✓ Personnel Information System
- ✓ License Monitoring System

3. Objectives of Land Records Software

- Proper Maintenance of Land Records
- Speedy Retrieval of Information
- Quick Issue of patta Extract to Public
- Easy generation of Reports
- Transparent Administration
- The Entire Taluk's Land Records Data can be compactly stored in a CD

4. Details available in A-Register

1. Taluk
2. Village
3. Survey Number
4. Subdivision Number
5. Old Survey Number
6. Part Indicator
7. Government/Private
8. Land Type
9. Irrigation Source
10. Tax Rate
11. Soil Type
12. Soil Class

13. Tax per - Hectare
14. Extent - Hectare
15. Extent - Ares
16. Total Tax
17. Patta Number
18. Remarks
19. Poromboke

5. Details Available in Chitta

1. Taluk
2. Village
3. Patta Number
4. Owner Number
5. Owner Name
6. Relative Number
7. Relative Name
8. Relationship
9. Address
10. Ration Card ID

6. Land Records Transactions that can be carried out

- Transfer of Registry
- Joint Patta owners
- Sub Division
- Clubbing
- Classification Changes
- Relinquishment
- Assignment
- Alienation
- Acquisition
- Encroachment

- Land Lease
- Adangal
- Land Revenue Collection

7. Other Features

- Separate login screens for KRP, ZDT, Tahsildar
- Patta Transfer Order / Sub Division can be directly generated from the System
- Tahsildar should sign the patta Transfer Order
- A Register and Chitta Register History tables maintained
- Chitta Extract can also be generated for Office copy and public.
- Log of Chitta extract printed for a particular period can be viewed

8. Changes in Business Process in computerized Environment

1. Provision for Adangal entry and related reports
2. Handles dispute, Conditional patta cases
3. Other Transactions viz., Assignment, Alienation, Acquisition, Encroachment and Lease can be handled
4. Important Reports required by the Taluk Office are generated by the Software
5. Adhoc Query facility available

9. Other Activities

1. Adangal data entry is going on in all Taluks
2. Data entry for Urban Land Records as per Town Survey Field register developed
3. Data entry software for Natham land (residential) has been developed

4. A web based software to submit applications over the web for services like patta extract / FMB extract/Adangal extract / Birth certificate has been developed

10. Citizen services at taluk office

Petition (Work Flow based) software has been developed. This is proposed to be implemented in all Taluks. Citizens can give petitions for patta transfer, Sub Division, F-Line, Birth Certificate, Death certificate at counters in Taluk office. Acknowledgement would be given to citizen. The concerned officer has to update the action taken. It is proposed to have a separate PC with printer at each Taluk.

Implementation Aspects

Steps taken by Tamil Nadu Government

- Training of all concerned Revenue Staff has been undertaken
- Key Resource Persons have been identified - 4 per Taluk
- Touch screen kiosks installed in 127 Taluks for citizen oriented services
- All rural Taluks are on line
- Two Facility Management Staff appointed for each district to provide support for Tamil NILAM implementation

Training

- ❖ A basic training program has been organized for all staff of Revenue Department of each Taluk through ELCOT

- ❖ Totally about 8000 officers have been trained (40 per Taluk)
- ❖ Intensive training was given to about 800 KRP Staff (4 per Taluk)
- ❖ NIC TNSC has conducted training programmes for DROs and for Tahsildars
- ❖ NIC District Centres are training Taluk Staff whenever required

Review of Land Record Computerization (LRC)

- ❖ Monthly review meetings held by Commissioner of Survey and Settlement
- ❖ Regular meetings are held with Officer on Special Duty
- ❖ Collectors are also reviewing the progress of LRC in the periodic meetings in the Districts.

Intranet based Monitoring system

- Intranet based Monitoring system for Land Records
- Intranet based TSCK Collection system

Important Instructions

- ✓ Each Tahsildar / Zonal Deputy Tahsildar is given an user ID in Tamil NILAM.
- ✓ Tahsildar / ZDT has to keep password secret.
- ✓ Tahsildar / ZDT should change the password at periodic intervals.
- ✓ Tahsildar / ZDT should operate the action taken for respective transactions by themselves and not operate through KRP.

- ✓ Sufficient quantity of consumables like toner, stationary should be kept.

Features of Land Records/Taluk Software Monitoring Software

Web based Software system for monitoring purpose
Facility for SCOSS, Collectors, DROs to view the status reports for monitoring

Details on following are entered:

Hardware Status
Usage of Land Records
Usage of other Software
Back up status
Training

Features of Intranet Based system for TSCK Collection

Various Reports can be viewed for a specified period:

- ❖ District wise Collection reports
- ❖ Taluk wise collection Reports
- ❖ Graphical Reports

Taluk Information System

Features of the OAP Software

Schedule for Treasury is generated by the Software
Greatly reduces time for preparing Money Orders every month
Generates the necessary Registers

Maintains details of all types of Pensioners like OAP, DWP, DAP, etc.

Pin code wise printing of Money Orders

Storing of monthly Acknowledgements

Certificate Management System

Birth Certificate

Death Certificate

Income Certificate

Nativity Certificate

Community Certificate

Legal heir ship Certificate

Petitions Monitoring System Features

Easy Monitoring of Petitions

Enables quick disposal of Cases

Details of petitions from various sources like CM Cell, MP/MLA, GDP, Mass Contact, etc., are maintained

Generates Acknowledgement to the Petitioner

Generates Pendency List - Officer Wise or Subject Wise

Generates Petitions Register

Maintains Disposal Status

Pay Roll System Benefits

DA, HRA, etc., are calculated by the system

Generation of necessary Schedules

Pay bill generation (time for pay bill preparation is greatly reduced)

Pay slip

Head of Accounts Schedules

Handles various types of Loans like HBA, Vehicle, Festival, etc.
Salary statement for Income Tax

Future Plan

1. Establishment of Touch Screen Kiosk in remaining 76 Taluks
2. Entry of Adangal data (Crops data)
3. FMB Computerization completion in Pilot Taluks
4. Connectivity of remaining Taluk offices with concerned SR offices
5. Implementation of Petition Counters in Taluk offices for patta transfer, F Line, Certificates
6. PKI enabling Land Records software
7. Establishment of a Data Centre at Chennai
8. Development of Urban Land Records Software
9. Connectivity between Taluks and District Collectorates and District Collectorates and Revenue Department/SCOSS Office
10. Development of Software for Jamabandhi
11. Enhancements in Land Records software
12. Data Warehousing Implementation
13. Lateral Linkage with Other Departments like Agriculture etc.

Strengthening of Revenue Administration and Updating of Land Records

a. Scanning of Village maps

Scanning of village maps of all the districts has been completed. Scanning of Survey and Settlement Records is to be taken up shortly by outsourcing through ELCOT.

b. Survey Using Modern Equipments

The survey equipment and methods are more than a century old. The need for modernization of survey technology was keenly felt. Hence, survey using GPS and Total Station was undertaken on a pilot basis in Konthi village in Chengalpattu Taluk, Kancheepuram District. In the light of the experience gained in pilot project, Chennai Metropolitan City is being surveyed using Global Positioning System (GPS) and Total Station.

The Government of India has also emphasized the need for taking up re-survey throughout the state and approved the proposal for the resurvey work of the entire state. An amount of Rs. 400.00 lakhs has been sanctioned as first installment at the ratio of 50:50 for executing the resurvey work. The re-survey work will be commenced in a phased manner. Centre for Survey Training and Research (C-STAR) has been established with the objective of imparting extensive training to the survey staff on modern survey equipments for the resurvey work.

Computerization of Land Records

Total number of persons viewed and total number of print outs (number of computerized extracts) issued as shown in Table 2.1 clearly indicate that there exists a variation in the total number of viewers and the total number of print outs by districts. The data further show that the difference between the highest amount of money collected from Villuppuram District and the lowest amount of money collected from Karur District was about 20 times.

Table - 2.1
Details of collection on issue of computerized land records
extract
(15-04-2002 to 13-08-2007)

	Districts	Total number of users (viewers)	Total viewing amount	Total number of print requests	Total printing amount	Total Amount
1	Villupuram	119726	239902	1119348	22386960	22626862
2	Erode	62464	125914	812154	16243080	16368994

Chapter 3

METHODOLOGY

An effort has been made in this chapter to discuss objective of the study, sample and sampling techniques and aspects of data collection from various types of structured schedules.

Objectives of the study

The objectives of the study are as follows:

1. To examine the impact of Computerization of Land Records on revenue administration and cultivators.
2. To analyze the ease and speed with which the cultivators are able to obtain the land records and the procedure for the same.
3. To examine the human resource development, capacity building and awareness generation for the implementation of the programme, and the adequacy of the same.
4. To study broadly:
The hardware and software utilized for the computerization of land records.
The methods of maintenance of the same.
The measures for security and preservation of the data stored in the computer.
5. To explicate the extent to which the data generated through the computerized Land Records system is helpful in planning and decision-making.

6. To find out the extent:

- i) CoLR has reduced workload of the revenue functionaries.
- ii) It has minimized the possibilities of interpolation of data on landholdings in the land records and rent seeking behaviour.
- iii) A comprehensive database on various facets of land is available for helping in land reforms.

Sample and Sampling Techniques

Fieldwork was conducted in four Districts of Tamil Nadu during the period of one month from 27th July 2005 based on agro-climatic zones. The study covers four Districts from four major agro-climatic zones i.e. one District from each major agro-climatic zone). The study was conducted in Vellore District from Northeastern zone, Coimbatore from Western zone, Thanjavur from Cauvery delta zone and Tirunelveli from Southern zone. The selection of the District from each climatic zone has been made on the basis of simple random sampling. From these selected Districts two Taluks were selected where CoLR has been operationalized. The selection of the Taluks was also done on the basis of simple random sampling. From these 8 Taluks 32 villages, i.e. four revenue villages in each Taluk have been selected. While selecting the revenue villages, we have considered the following two aspects in order to minimize spatial bias viz. (i) distance to the Taluk Office, and (ii) population size; and at the spatial level, village located remotely, located in mid way and near the Taluk Offices. At the demographic level, villages with low, average and large population sizes have been selected (although villages with extremely small or extremely large population were avoided).

Table - 3.1
Distribution of Respondents by Villages

Districts	Taluks	Villages	Respondents
Vellore	Arakkonam	1. Minnal	35
		2. Sembedu.	35
		3. Sirunamalli	35

23	Tiruchirappalli	449
24	Thoothukudi	446
25	Thiruvannamalai	1007
26	Thiruvarur	571
27	Vellore	811
28	Virudhunagar	596
29	Villupuram	1326
	Total	16389

The project work was started on 25.07.2005 with the orientation classes about the field work/data collection with the structured schedules designed for 1) Respondents (Household Schedules), 2) Thasildar, 3) Key Resource Persons, 4) Village Administrative Officer and 5) Village (Schedule). In order to select 140 respondents from each district, we have selected 35 former from each village. Data were also collected from 32 VAO's about the CoLR, 32 Village schedules were filled up by VAOs as the schedules dealt with the villages, 8 Thasildar and 8 KRPs with the help of the structured schedules. These schedules have been designed exclusively for each category.

For the study, information was also collected from the Revenue Officials at the village level, Taluk level and State level who were involved in the process of computerization of land records in order to understand the issues and problems involved during and after the introduction of the computerization of land records.

Data were collected from the Survey Department, Chennai from time to time. Data were also collected from Tahsildars' Office of the selected Taluks relating to number of persons viewed TSCK and issue of patta to the landowners for the year 2006 (month wise) and for the month of July 2007 (day wise).

It is to be noted that the operationalization of computerization of land records was more than two years at the time of primary data collection. Therefore, implementation of CoLR in these Taluks may not be termed as quite recent. This study is a modest attempt to critically assess the work done by Tamil Nadu for computerization of Land Records.

Table - 3.3
Information about the data collection

No	Type	No.
1	Farmers	1122*
2	Village Administrative Officers	32
3	Village Schedules	32
4	Tahsildars	8
5	Key Resource Persons	8
6.	NIC Officials	4

*Data were collected from 140 respondents in Arakkonam, Thenkasi, Nanguneri, Pollachi, Avinasi, and Thiruvudaimaruthur Taluks; 141 respondents in Thiruppathur and Pattukkottai Taluks.

Data Collection

Structured Schedules were used for data collection for this study. The schedules were framed by taking into the consideration of the objectives of the study. The schedules were structured but left open ended partially. The schedules were pre-tested and modified the schedules based on field experience. Five types of schedules were used for this study. The schedules had space for both the quantitative and the qualitative data collection as well as for the investigators personal observations.

Household Schedule

The household schedule has the following important items: Details of household, landholdings, general awareness about the computerization of land records, Benefits of computerization of land records, rent seeking behaviour, behaviour of conflicts / disputes after computerization of land records, facilitation in availing of institutional finance, facilitation in sale / purchase of land, and mutation.

Schedule for Tahsildar

The schedule for Tahsildar has the following important aspects: Information about the computerization, benefits of the computerization, procedure for mutation, maintenance of land records, revenue collection, computer maintenance, security provisions, problems related to computerization and suggestion for the improvement.

Schedule for KRP

Gliches in the software, administrative problem, problems in maintenance of computers, work load, training, nature of appointment, salary, security and computer infrastructure are the important aspects in the schedule for the KRP.

Schedule for VAO

Extent of computerization, patta transfers, benefits of computerization, training, problems of computerization, opinion about the CoLR and suggestions for improvement are the important aspects covered in the schedule for the VAOs.

Village Schedule

Land related information, land distribution, types of land, cropping pattern, gram panchayat and extent of computerization are the important aspects covered in the schedule for the village.

Chapter 4

FINDINGS: ANALYSIS OF DATA

An attempt is being made in this chapter to analyze the progress in the computerization of land records and perceptions of the respondents and Revenue Officials about the CoLR. Official data relating to progress in computerization of Adangal, digitization of FMS, number of persons used TSCK and number persons obtained patta extract were collected from the selected Taluk Offices and primary data were collected from the respondents. Information relating to the views of CoLR was also collected from Tahsildars, Key Resource Persons and Village Administrative Officers.

I. Progress in the Computerization of Land Records

Information relating to the data entry of Adangal record, digitization FMS, TSCK, issue of computerized patta and viewing of TSCK have been collected from the selected Taluks during the month of August 2007.

1. Adangal Data Entry

Coimbatore District

Computerization of Adangal record is going on in Coimbatore. Adangal data entry has been completed in all rural villages in Coimbatore.

Table - 4.1
Adangal Data Entry: Coimbatore District

No	Taluk Name	Total No. of villages	Total No of villages data entry completed	Balance
1	Coimbatore North	34	28	6
2	Coimbatore South	47	41	6
3	Mettupalayam	19	19	0
4	Avanashi	55	55	0
5	Pollachi	131	129	2
6	Tiruppur	39	38	1
7	Udumalpet	93	93	0
8	Palladam	62	62	0
9	Valparai	1	1	0
	Total	481	466	15*

* Urban villages.

Source: District Survey Office, Coimbatore.

Vellore District

Out of 86 revenue villages, data entry of Adangal record has been completed for 36 revenue villages in Thirupathur Taluk. Adangal data entry has been completed for all 145 revenue villages in Arakkonam Taluk

Thanjavur istrict

Data entry of Adangal record for all revenue villages in Pattukkottai Taluk has been completed. Data entry of Adangal record for all 89 revenue villages in Thiruvudaimaruthur Taluk was completed.

Thirunelveli District

Data entry of Adangal record for all 81 revenue villages in Nanguneri Taluk was completed. Data entry of Adangal record was completed in 30 revenue villages out of 34 revenue villages in Thenkasi Taluk.

It clear from the data discussed above that the data entry of Adangal record is going on in Tamil Nadu and will be completed soon.

2. Digitization of FMS/FMB

Coimbatore District comprises of 9 Taluks with 481 Revenue villages. 2,15,376 FMBs (Except Valparai Taluk) under updating of Registry scheme and 2,51,348 FMBs under Natham settlement work. These FMBs have to be digitized. Preliminary verification of the above FMBs has been completed in 2 Taluks. The work is under progress, in the remaining 6 Taluks. The Special Commissioner of Survey and Settlement has taken initiative to digitize the FMBs with a Software “CollabLand” developed by NIC, for this work 1000sq. feet building has been selected and the work will commence soon.

Digitization of Field Measurement Sketches has not been taken up in 6 Taluks viz. Thiruppathur and Arakkonam Taluks in Vellore District; Pattukottai and Thiruvudaimaruthur Taluks in Thanjavur District; Nanguneri and Tenkasi Taluks in Thirunelveli District.

3. Touch Screen Computer Kiosk (TSCK)

Touch Screen Computer Kiosk (TSCK) is one of the users' friendly devices to provide information about the name and the extent of land owned by the individuals. TSCK has to be installed in all Taluk head quarters to view status of land cultivated by the cultivators. Out of 206 Taluks in Tamil Nadu, only 127 Taluks have been provided with TSCK. List of TSCK available in Taluks with the date of installation is given in Appendix 2. Of the 8 Taluks surveyed in connection with this study, the TSCK was available only in 5 Taluks. In 3 Taluks the TSCK was allowed to use by the public viz. Pollachi, Tenkasi and Pattukootai. There was no TSCK in Avinasi Taluk, Nanguneri Taluk and Thiruvaidaimaruthur Taluk.

Table - 4.2
Availability of TSCK in the study area

Sl.No.	Name of the Districts	Name of the Taluk	TSCK
1.	Vellore	1. Arakkonam	Yes*
		2. Thirupathur	Yes@
2.	Coimbatore	1. Pollachi	Yes
		2. Avinasi	No
3.	Thirunelveli	1. Nanguneri	No
		2. Tenkasi	Yes*
4.	Thanjavur	1. Thruvidaimarudur	No
		2. Pattukkottai	Yes*

Note: * TSCK was not allowed to use by the public.

@TSCK was not working.

4. Issue of Computerized Land Record and Viewing of TSCK

An attempt has been made in this section to examine if there is any variation in issuing of patta and viewing of TSCK across the selected Taluks. Information relating to the issue of patta and viewing of TSCK for the year 2006 by months (monthly status) from January to December and daily (daily status) for the issue of patta and viewing of TSCK for the month of July 2007 were collected from the selected 8 Taluks in Tamil Nadu.

Daily Status

Information relating to number of persons used TSCK and number of persons availed of patta copy from Taluk Office for the month of July 2007 (monthly total) is given in Tables 4.3. The amount collected for viewing of TSCK and issue of patta extract was the lowest in Tenkasi Taluk with Rs. 6054.00 and the highest was in Arakkonam Taluk with Rs. 77800.00. The break up of daily collection is given in Appendices 3.1 to 3.8. Thus data clearly explicate that the data on number of persons used TSCK and the number of persons availed of patta copy vary across the month and across Taluks.

Table - 4.3
Physical and Financial Achievements from using TSCK and
Obtaining Chitta: Daily Status
(July 2007)

Taluks	No. of persons used TSCK	Amount collected for TSCK (Rs)	Number of persons obtained chitta	Amount collected for Chitta extract (Rs)	Total Number of persons used TSCK and obtained Chitta	Total amount collected (Rs)
Thirupathur	-	-	773	15460	773	15460
Arakkonam	250	500	3865	77300	4115	77800
Nanguneri	-	-	2525	50500	2525	50500
Thiruvidaimaruthur	-	-	1100	22000	1100	22000
Tenkasi	177	354	285	5700	462	6054
Avinashi	-	-	2838	56760	2838	56760
Pollachi	-	-	2929	58580	2929	58580
Pattukkottai	-	-	458	9160	458	9160

Month wise

Information relating to number of persons used TSCK and number of persons availed of patta copy from Taluk Office for the year 2006 (yearly total) is given in Table 4.4. The amount collected for viewing of TSCK and issue of patta extract was the lowest in Tenkasi Taluk with Rs. 50347.00, while the amount collected was the highest in Pollachi Taluk with Rs. 712448.00. The break up of monthly collection is given in Appendices 4.1 to 4.8. Thus data clearly explicate that the data on number of persons used TSCK and the number of persons availed of patta copy vary across the year and across Taluks.

Table - 4.4
Physical and Financial Achievements from Using TSCK and
Obtaining Chitta of Thiruvidaimaruthur Taluk: Monthly
Status (2006)

Taluks	No. of persons used TSCK	Amount collected for TSCK (Rs)	Number of persons obtained patta	Amount collected for patta extract (Rs)	Total Number of persons used TSCK and obtained patta	Total amount collected (Rs)
Thirupathur	-	-	20003	400060	20003	400060
Arakkonam	530	1060	26179	523580	26709	524640
Nanguneri	-	-	13185	263700	13185	263700
Thiruvidaimaruthu	-	-	7323	146460	7323	146460
Tenkasi	493.5	987	2468	49360	2961.5	50347
Avinashi	-	-	28528	570560	28528	570560
Pollachi	4554	9108	35167	703340	39721	712448
Pattukkottai	138	276	4076	81520	4214	81796

Note: Fraction in the number of users of TSCK in Tenkasi Taluk was due to improper use i.e. sometimes farmers use one one-Rupee coin only instead of two one-Rupee coins.

II. Analysis of the Primary Data

1. Distribution of Landholdings

Land is the major source of livelihood for about two-thirds of the population in India. Possessing the land is considered as status symbol. Distribution of respondents by social groups and ownership of land as given in Table 4.5 clearly demonstrates that average size of holdings was 1.15 ha for the Scheduled Castes. Out of 1122 respondents, Scheduled Caste respondents constitute 7 per cent but they control only about 4 per cent of the land. This

was the lowest among all social groups. Information relating to size of the land owned by villages and by social groups as given in Appendix 5 clearly show that 35 per cent of the respondents belonging to the marginal holdings control only 8.94 per cent of the land; 27.63 per cent of the respondents belonging to the small farmers category own 17.34 per cent of the land; 35.2 per cent of the respondents belonging to semi-medium and medium category control 57.71 per cent of the land; and 2.14 per cent of the respondents belonging to the category of large farmers account for 16.02 per cent of the land. Thus the data clearly show that there exists inequality in the distribution of landholdings.

Table - 4.5
Distribution of Landholdings by Social groups

Category	Number of Respondents	Area owned (in ha.)	Average size of the holdings (in ha.)
SC	79	90.80 (224.27)	1.15
ST	1	10.93 (27.00)	10.93
BC	725	1764.25 (4357.64)	2.43
MBC	277	466.30 (1151.76)	1.68
Others	40	99.42 (245.57)	2.49
Total	1122	2431.68 (6006.24)	2.17

Note: Figures in brackets denote area in acres.

2. Educational status of the respondents

Education is one of the important indicators for human development. But in India, all people do not have equal access to education. Educational level of respondents as shown in Table 4.6 clearly explicates that about 75 per cent of the respondents

had their education from primary level to high school level. About 10 per cent of the respondents had no formal education i.e. illiterates. A little over 10 per cent of the respondents were graduates and post-graduates. Thus the data clearly shows that a little over 90 per cent of the respondents were literates.

Table - 4.6
Educational Status of the Respondents

Taluk		Education				
		Illite-rate	Literate	Primary	Middle	High School
	1	2	3	4	5	6
Arakkonam	Number	20	7	25	26	43

Note: One farmer from Thenkasi has not responded.

3. Occupational Characteristics

Occupational characteristics of the respondents as given in Table 4.7 show that 77 per cent of the respondents solely depend up on agriculture for their livelihood. About 3.2 per cent of the respondents were engaged in agriculture as farmers-cum-agricultural workers. It is significant to note that 23 per cent of the respondents were engaged in non-agricultural occupations.

5. General Awareness about Computerization of Chitta

Awareness is an important indicator for utilization of any development programmes. In India, the benefits of government programmes are not reaching the needy people due to lack of awareness on the part of rural masses. Implementation of the CoLR programme in Taluks chosen for the study is more than two years. We found that 95 per cent of the respondents were

aware of the programme. It is to be noted that the awareness of the computerization of land records in Avinashi and Pattukottai Taluks is hundred per cent (Table 4.9).

Table - 4.9
Awareness of the computerization of land records

	94.8%	5.2%	100.0%

6. Sources of Information

It may be noted that 73 per cent of the respondents got the information about the computerization of land records through VAO or other revenue personnel (Table 4.10). It is true that since the government of Tamil Nadu has banned the issue of manual patta from the date of operationalization of issue of patta with the help of computer. Therefore it is necessary by the revenue personnel to provide proper information to the landholders. Only 9 per cent of the respondents were aware of the computerization of land records through their friends or neighbours and the remaining respondents came to know about it through the initiative of the Revenue Department viz. advertisement in the news papers, posters, wall writing, notice board in Taluk/Revenue Offices and scrolling strip on the local Tele Vision. During our field study we found that the Revenue Department in Tamil Nadu adopted various measures in efficient manner for the enhancement of the awareness about the CoLR among the landholders in the State. These measures enhanced the awareness amongst landholders.

7. Computerized Patta Obtained by the Respondents

A little over 93 percent of the respondents obtained the patta either by themselves or with the help of others, viz. VAOs, middlemen and other persons like relatives (Table 4.11). In Thirunelveli District computerized pattas were distributed by the Revenue department by conducting the special camps. Whenever such camps are conducted, computer with printer is being taken to villages and distributed the patta to the farmers. Revenue Officials used to give wide publicity about the camps to the village people to enable them to obtain patta in the camps. In the selected villages both in Pattukkottai and Nanguneri Taluks, computerized patta were being distributed by conducting the camps.

Table - 4.11

8. Information Flow

The government of India started this programme for the benefit of the farmers to escape from the harassment of revenue personnel especially the VAO. Before introduction of the computerized patta, farmers had to go to the VAO to get the manual patta several times/days. In addition to visiting the VAO Office several times, farmers had to pay money as bribe. In the manual system, it was very difficult to obtain patta without providing/bribing money to VAO. Therefore we asked a question to the farmers about the benefits of the computerization of land records. It was found that 83 per cent of the farmers were able to get access to the computerized patta easily and without any delay. But this position is quite dissimilar in some of the Taluks. Opinion about the easiness in the service delivery at the Taluk Office is illustrated in the following Table 4.12.

Table - 4.12

Opinions about Easiness in Service Delivery at the Taluk Office (in per cent)

Taluk/District	Quickness in Service Delivery	
	Yes	No
Arakkonam	79.9	20.1
Thirupathur	39.4	60.6
Vellore	60.2	39.8
Thenaksi	99.1	0.9
Nanguneri	90.60	9.40
Thirunelveli	94.4	5.6
Pollachi	96.2	3.8
Avinasi	90.1	9.9
Coimbatore	93.2	6.8
Pattukottai	98.6	1.4
Thiruvadaaimarudur	68.5	31.5
Thanjavur	84.1	15.9
Total	82.9	18.1

Data as presented in Table 4.12 indicate that in Vellore district, the service distribution of computerized pattas was abysmally low when compared to other districts. Taluk-wise position indicates that the service delivery in Thirupathur Taluk is very much low. According to the respondents of this Taluk, revenue personnel were not issuing computerized patta. Many respondents reported that the revenue personnel demanded money against the issue of computerized patta, and they had to bribe them to get the patta. The service of issuing the computerized patta by the revenue department in other Taluks was very appreciable. It may be desirable that the authorities of the revenue department pay sufficient attention to redress the problem of the farmers while issuing the computerized patta. The time required to obtain computerized patta after computerization is presented in the following Table 4.13.

Table - 4.13
Time Required to Obtain Computerized Patta by the farmers
(in per cent)

Taluk/District	Time taken by the farmers					
	Imme- diately	Within a day	2 days	3 days	3-7 days	More than 7 days
Arakkonam	12.90	41.40	27.90	5.7	10.80	1.4
Thiruppathur	2.8	17.9	19.3	21.40	19.20	19.3
Vellore	7.80	29.60	23.60	13.60	15.00	10.40
Thenaksi	56.50	35	3.6	2.10	0.70	2.1
Nanguneri	67.60	32.40	-	-	-	-
Thiruelveli	62.10	33.60	1.7	1.10	0.40	1.1
Pollachi	65	32.90	0.70		0.70	0.70
Avinasi	12.80	44.30	26.40	10.70	2.10	0.70
Coimbatore	38.90	38.60	13.60	5.40	1.80	1.7
Pattukottai	31.20	42.60	12.10	2.10	9.90	2.10
Thiruvidaaimarudur	12.10	25.00	17.90	17.90	25	2.1
Thanjavur	21.80	33.80	14.90	10	17.40	2.1
Total	32.70	33.90	13.50	7.50	8.60	3.80

The data as presented in Table 4.13 clearly indicate that overall situation about the time taken in obtaining the computerized patta was quite satisfactory. About two-thirds (66.60 per cent) of the respondents were able to get the patta in one day and it is significant to note that about half of them were able to get the patta immediately. Here, the question arises, why this figure is not cent per cent? The reasons cited were power failure at the Taluk Office and the absence of Key Resource Persons (TSCK Operator). The persons designated as Key Resource Person (KRP) for distributing the computerized patta sometimes might go away for any other work for the Revenue Department is also causing delay in getting the patta to landholders. The Taluk offices in the selected districts are equipped with UPS for two hours only and the power failure for long duration is also causing problems to landholders frequently. District wise data clearly explicate that the time taken to issue the patta was less in Thiruelveli district. Revenue Administration in Vellore District has to improve the time taken up in issuing the computerized patta right now. Many respondents felt happy about the service of delivery of computerized land records. Only 13.5 per cent of the respondents have received the patta in 2 days; 7.5 per cent of the respondents received in 3 days; 8.6 per cent of the respondents received in 3-7 days and only 3.8 per cent of the respondents received the patta after one week.

Information relating to the time taken to obtain the patta prior to the computerization of land records is represented in Table 4.14. The service mechanism was not up to date for issuing patta prior to computerization. The time of issuing patta depends up on the money provided by the farmers to the VAO. The data as given in Table 4.14 clearly demonstrate that 56.3 per cent of the farmers obtained patta in the same day. And 16.6 per cent of the farmers received the patta in 2-3 days; 5.7 per cent of the respondents received in 4-5 days; 10.4 per cent of the respondents received in

6-7 days and only 5.2 per cent of the farmers received the patta after one week. A comparison of data relating to the time taken to receive the patta prior to computerization and after the computerization clearly shows that the time taken to receive the patta after computerization has reduced considerably.

Table - 4.14
Time required to obtain the patta by the farmers
prior to computerization (in per cent)

Tehsil/District	Time taken by the farmers					
	Same Day	1-3 Days	3-5 Days	5-7 Days	One week one month	More than one month
Arakkonam	50.4	5.4	8.5	17.10	12.40	6.2

Total	56.30	16.60	5.70	10.40	5.20	5.50

9. Accuracy of the Computerized Land Records

Data relating to the accuracy of the computerized land records as shown in Table 4.15 clearly expounds that 88.0 per cent of the farmers have expressed that there was 100 per cent accuracy in the computerized data on landholdings; 9.4 per cent of the farmers have expressed that the accuracy of the size of land owned by was not 100 per accuracy which means the revenue records maintained were not correct and there bound to be some

err in landholdings; and only 2.6 per cent of the farmer have expressed that they do not know about the accuracy of data relating to the landholdings after computerization of land records.

Table - 4.15
Accuracy of computerized records

Taluk	Yes	No	Can't Say	Total
Arakkonam	115	10	15	140
	82.1%	7.1%	10.7%	100.0%

	88.0%	9.4%	2.6%	100.0%

10. Harassment

Information relating to the harassment faced by the farmers while obtaining the computerized patta from the Taluk Office as illustrated in Table 4.16 clearly indicates that the majority of the

farmers have not faced any harassment while obtaining the patta. Over four-fifths (82.7 per cent) of the respondents have reported that there was no harassment while getting the patta; but on the contrary only 15.4 per cent of the respondents have stated that they have faced some problem from the Taluk Office while getting the patta and a small fraction of the respondents have reported that they were harassed by others. The Taluk-wise situation clearly depicts that in Thiruppathur Taluk, a significant proportion of farmers i.e. over 50 per cent of the respondents faced harassment from the Revenue Officials while obtaining the patta.

Table - 4.16
Harassment faced while obtaining the computerized patta

Taluk		Government Officials	Others	No Harassment	Total

Note: One respondent from Thiruvidaimaruthur has not responded.

11. Manipulation of Computerized Records

The right of possessing the land records was vest with the VAOs in Tamil Nadu. It was easy for them to manipulate the land records. Very often they favoured the large farmers and influenced persons. The data as given in Table 4.17 clearly show that 50.2 per cent of the farmers have expressed that computerized records cannot be manipulated; 26.4 per cent of the farmers have reported that computerized records can be manipulated; and 23.4 per cent of the farmers have expressed that they do not know about the manipulation of the computerized records.

Majority of the farmers from Thiruppathur (77.3 %); Tenkasi (83.6 %); Avinasi (85.7 %); and Pattukkottai (90.8 %) have expressed that computerized records cannot be manipulated. About half (50.7 per cent) of the farmers from Nanguneri and 57.9 per cent of the farmers from Thiruvidaimaruthur have stated that computerized land records can be manipulated.

Table - 4.17
Computerized records cannot be manipulated

Taluk		Yes	No	Can't Say	Total

13. Sale and purchase of land

Information relating to the computerization of land records facilitates sale and purchase of land as presented in Table 4.19 clearly shows that 77.8 per cent of respondents have expressed that computerization of land records has facilitated the sale and purchase of land; 3.5 per cent of the respondents have stated that computerization of land records has not facilitated the sale and purchase of land; 18.7 per cent of the respondents have stated that they do not know about the facilitation of computerization of land records has led to sale and purchase of land smoothly. Analysis pertaining to Taluk level clearly shows that there is not much

variation in computerization land records, which facilitated the sale and purchase of land.

Table - 4.19
Computerization facilitate in Sale & Purchase of land

Taluk		Yes	No	Don't Know	Total
Arakkonam		99	6	35	140

14. Information about the Government Land

Access to various types lands was very much low particularly to the poor and the weak before the computerization of land records. Computerization of land records has led to transparency not only in the distribution of land ownership but also the availability of different types of common/government lands in the villages. Data on the information about the availability of government land as given in Table 4.20 clearly indicate that only 13.4 per cent of the farmers have reported that they come to know about the common

land or government land in the village; 21.3 per cent of the respondents have expressed that they do not have information on common land in the village; and about two-thirds (65.3 %) of the respondents have reported that they do not know about the availability of common land in the village through the computerization of land records.

Table - 4.20
Information about the government land

Taluk		Yes	No	Don't Know	Total
Arakkonam		23	22	95	140
	%	16.4%	15.7%	67.9%	100.0%

	%	4.3%	21.6%	74.1%	100.0%
Total		150	239	732	1121
	%	13.4%	21.3%	65.3%	100.0%

Note: One respondent from Thiruvidaaimaruthur has not responded.

15. Computerized patta obtained by Sources

After computerization of land records, farmers have to obtain patta only in the Taluk Office. Sometimes it may be difficult for the farmers to go Taluk Office for want of time. Information

relating to whether the respondents themselves obtained patta or obtained the patta with the help of others as shown in Table 4.21 clearly explicates that about 75 per cent of the respondents reported that they obtained the computerized patta by themselves; 14.5 per cent of the respondents obtained the patta with the help of VAOs; 4.5 per cent of the respondents obtained patta with the help of other persons. The data further show that 6.1 per cent of the respondents obtained patta by themselves in camps organized by the District Collector Office.

Table - 4.21
Computerized patta obtained through

Taluk		Respon- dents	Through VAO	Through Other Persons	Through Camps	Total
Arakkonam		88	36	16		140
	Row %	62.9%	25.7%	11.4%		100.0%

	Row %	74.9%	14.5%	4.5%	6.1%	100.0%

Note: Three respondents from Pattukottai Taluk and one respondent from Thiruvidaaimaruthur Taluk have not responded.

16. Purpose of Getting the Computerized Patta

Data on purpose of getting the computerized patta as shown in Table 4.22 clearly explicate that 46.8 per cent of the farmers have obtained patta to know about the status of the land owned i.e. for own use; a significant number of persons i.e. 41.1 per cent of the farmers have obtained patta for the purpose getting loan. Only about 3 per cent of the respondents have obtained the patta for the purpose of sale/purchase of land.

Table - 4.22
Purpose of getting the computerized patta

Taluk		Purchase	Sale	Self	Loans	Legal	Others	Total
Arakkonam		1	5	49	76	2	6	139
	%	0.7%	3.6%	35.3%	54.7%	1.4%	4.3%	100.0%

	%	0.9%	1.8%	46.8%	41.1%	1.9%	7.6%	100.0%

Note: One respondent from Arakkonam Taluk and one respondent from Thenkasi Taluk have not responded.

17. Fee Paid to Get Patta after Computerization

Data relating to the fee paid by the respondents to get the patta after computerization as given in Table 4.23 clearly shows that 69 per cent of the respondents paid only Rs. 20.00 which was the fee prescribed by the government for obtaining the computerized patta. The remaining 31 per cent of the respondents paid over and above the fee fixed by the government i.e. more than Rs. 20.00 to get the computerized patta.

Table - 4.23
Fee paid to get patta after Computerization
(in Rupees)

Taluk		<20.00	20.00	>20.00	Total
Arakkonam	Number	0	121	19	140
	Row %	.0%	86.4%	13.6%	100.0%
Thirupapathur	Number	0	68	73	141
	Row %	.0%	48.2%	51.8%	100.0%
Thenaksi	Number	0	59	81	140
	Row %	.0%	42.1%	57.9%	100.0%

Thiruvidaaimarudur	Number	0	76	64	140
	Row %	.0%	54.3%	45.7%	100.0%
Total	Number	1	774	347	1122
	Row %	.1%	69.0%	30.9%	100.0%

18. Fee Paid to Get Patta before Computerization

Information on fee paid to obtain the patta prior to computerization is shown in Table 4.24. It is clear from the data that only one per cent of the respondents obtained patta without paying any money; 9.4 per cent of the respondents paid between Rs. 5.00 and Rs. 15.00 which was less than the fee prescribed by the government to get the computerized patta; 14.3 per cent of the respondents paid Rs. 20.00 which was the fee prescribed by the government to get the computerized patta. It is to be noted cautiously that about 75 per cent of the respondents paid more than Rs. 20.00 to obtain the patta from VAO.

A comparison of fee paid by the respondents before and after the computerization of land records shows that about 75 per cent of the respondents paid over and above the fee fixed by the government to obtain the patta before computerization and 31 per cent of the respondents paid over and above the fixed by the government i.e. more than Rs. 20.00 to get the patta after computerization.

Table - 4.24

III. Views of the Revenue Officials

1. Tahsildars

When the Research Team visited the Taluks for data collection, all Tahsildars were asked to fill in the schedule. Out of 8 Tahsildars, only 7 returned the filled in schedules and Tahsildar from Thiruppathur Taluk has not responded.

It is an undisputable fact that computerization of land records benefited the farmers. While referring to the benefit of the computerization, all Tahsildars have unanimously expressed that efficiency in the disposal of mutation has increased; computerization of land records has resulted in providing accurate data on land holdings. All Tahsildars have agreed that land records are being updated regularly; computerized land records reduced the land related conflicts among the landowners and decreased the corruption. Computerization of land records also resulted in checking the interpolation in land records

Out of 7 Tahsildars, 4 Tahsildars have stated that that computerization of land records have reduced the work load of the Taluk Office, two Tahsildars have expressed that computerization of land records have not changed work load of the Taluk Office and one Tahsildar has reported that the work load of the Taluk Office has not reduced but remained the same. All Tahsildars have stated that computerization of land records has increased revenue collection of the Taluk Office.

Problems

While refereeing to the problems faced by the Tahsildars after computerization of land records, all of them have demanded that the facility of annual maintenance of computers have to be provided. They also demanded that adequate stationery items including of toner as the dot metric printer is no longer working. They are in need of a permanent Key Resource Person (KRP) to issue patta to the farmers, as the Taluk Office utilizes the services of other staff member as KRP. For example, in Arakkonam Taluk Office, a trained Surveyor is working as KRP.

2. Village Administrative Officers

All 32 VAOs have filled in schedules and returned to us. The question relating to the computerized land records are more accurate than the manual records, out of 32 VAOs, 22 VAOs have stated 'yes' 9 VAOs have reported 'no' and one VAO has not responded. Information on computerized land records are 100 per cent accurate, 21 VAOs have stated 'yes' 10 VAOs have stated 'no' and one respondent has not answered. Another question whether the computerized records has reduced the work load of VAOs, 19 VAOs have reported 'yes', 4 VAOs have stated 'no' and 8 VAOs have expressed that the work load was 'not reduced but remained the same' and one respondent has not answered. Views expressed by VAOs clearly indicate that a considerable number of VAOs are not happy about the computerization of land records, as they played a major role in issuing the land related documents before the computerization and it reduced the corruption and rent seeking behaviour of the VAOs after the computerization of land records.

3. Key Resource Persons

Data relating to the computerization of land record was collected from 7 Key resource Persons and the filled in schedule was not received from the KRP, Thirupathur Taluk.

Question relating to Glitches/Problem of software was asked to all the KRPs, out of seven, only four KRPs have answered. Their views are: 1. Anti virus software is not installed properly. 2. UPS is not functioning, 3. Pattadar's name can't be deleted form a joint Patta even if one wishes to sell his share of land to the other holder. This option should be provided. Out of 7 KRPs, 4 KRP have stated that power cut is a problem while administering the issue of patta. It occurs even full day.

Problems in maintenance of computer system

1. Exists when a coin is inserted by an ignorant person in the TSCK.
2. Insufficient supply of stationery items.
3. The annual maintenance contract (AMC) with has lapsed. The AMC should be renewed with any professional concern.

Work other than land records on computer system

1. Pay bill, election work, land revenue collection, agricultural statistics and issues relating to Sri Lankan refugees.
2. OAP, pay, certificate and monitoring system are also undertaken.
3. KRP is also used for office work.

4. Patta Transfer Application (PTA), Patta Transfer Registry (PTR), 8A (sub-division of land) and related orders to be entered into computer.

KRP's appointment and salary

All KRPs are not newly or exclusively recruited and they are already working as Sub Inspectors of Survey and Senior Draught men, Office Clerk, etc.

4. Field Report

Field report was prepared based on information collected from group of people (group discussion) at the time of data collection in all the villages. For the sake convenience, these reports have been presented at the Taluk level.

a. Pollachi Taluk

Pollachi stands first in CoLR programme relating to awareness and usage of TSCK by the public and issue of patta extract. Majority of the landowners want alternative TSCK to be kept at the Firka headquarters, or at the VAO Office. Most of the farmers obtained a copy of the patta for the purpose of getting agricultural loans and subsidies. A few of them have reported that the Village Administrative Officer was demanding money for issuing the Adangal record and FMB, as these records are not yet computerized.

b. Avinashi Taluk

It was reported that the Taluk Officials conducted special camps at the Firka head quarters every month and the computerized pattas were issued by the District Collector or Tahsildars to the

landholders at the camps. It was observed from the group discussion that:

- The CoLR system has reduced unnecessary time consuming and other expenditure.
- Majority of patta holders have obtained patta for the purpose of getting loans, subsidies, sales, and purchase of land and electricity connections.
- Timely action was taken for mutation, patta transfer and subdivisions.
- A few farmers have reported the CoLR is the real and revolutionary measure.
- Copy of the computer patta was not legible as the printouts were not good.
- The VAO was demanding money for issuing Adangal and FMB.

c. Tenkasi Taluk

The issue of computerization of patta was inaugurated on 26-01-03. The TSCK was instituted on 16-04-05. A large number of persons obtained computerized patta at the special camps. The advertisement regarding the CoLR was going on in daily newspaper, VAO and Taluk Office notice boards and Scrolling on local cable TV Channels. It was pointed out from the group discussion that:

- Most of the landowners have appreciated the special camps conducted by the Taluk Office.
- Some farmers suggested the CoLR patta to be issued at free of cost.

- Land records were not properly updated and respondents have complained that their names have not been properly incorporated in the computerized patta.

d. Nanguneri Taluk

Issue of computer patta extract was made available from 16.4.2003 on wards. Several special camps were conducted in the Taluk. Majority of the pattas were issued at the special camps. To create awareness to the public, the Revenue Officials made the following advertisement, i.e. campaign, wall posters, paper news, scrolling in local cable TV networks, showing slide in local cinema halls, banners, and tom tom in villages. It was pointed out from the group discussion that:

1. The VAO's is demanding some money for patta transfer and sub division
2. A few farmers obtained patta for getting loans, subsidy and to get electricity connection.
3. Many farmers have stated that they were compelled by the VAO to get the computerized patta at the camp.

e. Pattukkottai Taluk

TSCK was installed on 29-04-05. A large number of landholders obtained patta at the special camp. The advertisement regarding the computerization was going on daily newspaper and a copy of the advertisement was kept at the notice boards of the VAO Offices. Advertisement was also going on in local cable TV on various channels in the form of scrolling. It was pointed out from the group discussion that:

- Rs. 20/- per copy of the computerized patta is very high.
- Landowners were asking how long the computerized patta valid.
- Computer creates new patta every time at the time of the patta transfers. It does not incorporate with the already existing patta number.
- Photo identity with computerized patta copy for Rs.20.
- Most of the farmers want patta to be issued without requisition letter

f. Thiruvudaimarudur Taluk

Computerized patta extract is being issued from 1.10.2003. It was reported that to obtain computer patta farmers should give requisition letter with five-rupee court stamp affixed. Farmers were also paying Rs.10 for document writer, which is an extra burden for the farmers. It was pointed out from the group discussion that:

- Awareness was created through pamphlets, newspaper and tom tom with the public about CoLR programme.
- Most of the farmers obtained the patta for getting loan, subsidy and electricity connection to the bore well.
- Respondents felt that Adangal and FMB to be computerized.
- Some of the respondents want the computer patta should be legible and clear, as the print out was not good.
- Few respondents felt that the new system will be free from corruption and provides transparency in the land holdings.

g. Arkkonam Taluk

In Arakkonam Taluk, the TSCK system was not allowed to be used by the public. The Key Resource Person has stated that from the date of installation till now they have not collected any money from the TSCK. Farmers have to give requisition letter with two rupees court stamp affixed in order to get the patta; most of the farmers irrespective of their level of literacy prefer to get requisition form from the document writer who was sitting outside the Taluk Office. Farmers were paying Rs.10 to 15 for writing the requisition to the document writer. It was pointed out from the group discussion that:

- ✓ Most of the farmers have received the patta by spending more than a day.
- ✓ Most of the farmers felt happy to get patta from Taluk Office without depending on the Village Administrative Officer.
- ✓ Most of them obtained patta to get loans and subsidy.
- ✓ A few farmers reported that the computer patta print out is not legible.
- ✓ Most of the landowners want patta to be obtained without submitting the requisition letter.

h. Thiruppathur Taluk

TSCK was established on 19.08.2005 and it functioned from 19.5.2005 to 25.5.2005 only. The TSCK was not working due to the technical problems. The amount collected from the TSCK was Rs. 112/- only for above-mentioned period. The Taluk Officials receive request applications from farmer with Rs. 2 court stamp affixed on it. In addition to this farmers were paying Rs. 10 for getting written application from a document writer

who sits in front of Taluk office. It was pointed out from the discussion that:

- There is no permanent computer operators (KRPs)
- Most of the landowners received CoLR patta to get loans; subsidies and electricity connection for bore well.
- A few farmers have reported that they have to spend a considerable amount of money for getting the patta transfer under CoLR system.
- Most of the landowners want patta to be obtained without requisition letter.
- Some farmers have suggested that the computer patta should be legible and error free.
- Most of the landowners have obtained the patta by spending more than a day.

To sum up, the analysis of computerization land records discussed above clearly indicate that the computerization has brought about the transparency about land records and improved the efficiency of the delivery systems of the Revenue Department. Easy access to information about welfare programme of the Revenue Department was an added advantage of the computerization of land records in Tamil Nadu.

Chapter 5

CONCLUSION

Touch Screen Computer Kiosk provides useful information to the public. People could view about their land, land guideline value, survey and sub-division numbers, view and get the birth and death certificates, particulars about the old age pension and the welfare schemes of the Revenue Department.

There is a considerable variation in the awareness about the computerization of land records. The variation is partly due to the fact that a little over one-third of the Taluks are not provided with the TSCK.

The time required to obtain the patta has considerably reduced after the computerization of land records. The situation before computerization land records, farmers had to wait long time; sometimes waiting time was more than a day or two and in some cases it will be more than two days to get the manual certificate about their land.

The amount of money spent to obtain the patta has come down after the computerization of land records. Now farmers are able to get the computerized patta by paying Rs. 20.00 per patta. The period before the computerization farmers had to pay sometimes over one hundred Rupees to the VAO, as there was no fixed rate for obtaining the manual patta.

Land related disputes are common in those days i.e. prior to computerization of land records. There used to be some factual errors. Error could have happened inadvertently or manipulation

of land records by the VAO. Introduction of the computerized patta has reduced the manipulation land records and as a result land related disputes have come down drastically.

The level of harassment by the VAO was high under the manual system. Updating of land records was left to VAO and it took many months in some cases. Updating land records due to sale and other transaction such as mutation, sub-division was faster after the computerization of land records. After computerization of land records, once application for mutation or sub-division is entered in the computer, it tracked until it is disposed of.

It was unrealistic for the common man to get access to land records before computerization of land records. After computerization of land records, it is possible for any one to view about the details of different types of land by inserting two rupees in the Touch Screen Computer Kiosk (TSCK). Information about the common property resources and other government land is easily available to the public. In fact it provides chance for the public to scrutinize the land records.

Computerization of Land Records has reduced the workload of the Officers of Revenue Department viz. the VAO, RI and Tahsildar. Now they need not maintain records and need not consult the old records. A computer operator can maintain land records and handle the issuing of land records easily.

Human resource development and capacity building have gone up after computerization of land records. The CoLR will result in easy and timely availability of data and will facilitate to review, collate and analyze the data for various administrative and planning purposes.

CoLR is to a large extent, providing remedy for the multiple problems of land records. Instituting the TSCK at the Taluk office will provide a wealth of information not only to the farmers but also all section of the people. The integration of other information like old age pension certificates, birth and death certificates, details about the welfare programmes, etc at the same TSCK is another added advantage of the programme in Tamil Nadu. Due to the introduction TSCK, the awareness level of farmers has increased considerably as compared to the period before computerization of land records. Therefore it may be concluded that CoLR has improved land record management system in Tamil Nadu. It has succeeded in making a 'closed and exclusive' system into an 'open and transparent' system. The CoLR programme in Tamil Nadu has also succeeded in bringing about administrative accountability, transparency, checked corruption and harassment and has provided equitable access to all people including the landless. Thus, Computerization of land records has minimized the possibilities of interpolation of land records and rent seeking behaviour of the Revenue Officials.

Chapter 6

RECOMMENDATIONS

1. Training: Revenue Inspectors, VAOs and Survey department functionaries may be trained on the software used as they are very crucial for the implementation of the computerization of land records.

Generator: The Taluk centre is often afflicted with regular power cut. If computer does not have a generator back up for uninterrupted power supply, the processes of issuing patta often involved long delays. UPS generally cannot work for more than two hours. Hence, it is necessary that a 5 KVA generator to be provided in every Taluk.

Technical Person: If there is any problem in the software or hardware in the computer system, no expert is available at the Taluk. Under the present set up, computer expert has to come from District or State Head Quarters to tackle the problem. This causes inconvenience to farmers. Hence, it may be necessary to have a trained person at the Taluk level. In order to provide uninterrupted service to the farming community, it may be necessary to have tie-up with reputed computer company at the Taluk level.

2. Online Mutation: Online mutation has to be initiated soon so that the data are always synchronizing with the time.

TSCK: TSCK was not installed in all Taluks in Tamil Nadu and wherever installed, in many Taluks the TSCK was not working. Necessary steps may be initiated to get the TSCK repaired

immediately. In order to empower the farmers, TSCK may be installed in all Taluk Head Quarters. The Taluk administration may seek help from MPs and MLAs to finance for installation of TSCK from MP/MLA LAD. This will enhance the access to the farmers.

Hardware Up gradation: There may be a mechanism to upgrade the hardware in view of technological advancements and also to take care of fresh requirements viz. higher capacity hard disk, new operating system, etc.

Printer and Stationery: Additional printer may be provided to overcome the problem of any fault in the existing printer. Adequate supply of stationery items may be provided to enable the KRP to work faster.

Computerization of Adangal and FMS: The exclusive right of possessing land records by the Village Administrative Officer provides chance for corruption for issuing a copy of the Adangal and FMB as these records are not yet computerized and there is going to be a growing demand for Adangal and FMB in the near future, hence these records may be computerized soon. It is heartening to note that computerization of Adangal is going on in Tamil Nadu and digitization of FMS (non-spatial data) and digital signature based on Public Key Infrastructure (PKI) are to be taken up and completed soon.

Permanent Key Resource Person: It is a really a pathetic situation in the computer centre of the Taluk Office. One may find a temporary employee or any employee of the Taluk office is working as KRP. A person with diploma in computer may be appointed exclusively to take care of computerization aspect at

the Taluk Office. The government of Tamil Nadu may consider positively to appoint permanent KRPs.

Integration of Departments: There is a need to integrate departments dealing with lands, such as, Registration Department with Taluk Office to speedy implementation computerization of land records.

Web site: Land record data may be put into web/internet for easy access and dissemination. Tamil Nadu government have already issued orders for setting up of Tamil Nadu State Wide Area Network (TNSWAN). This project is being jointly implemented by the Government of Tamil Nadu and the Government of India and it aimed at providing connectivity utilizing the 2 Mbps free bandwidth linking State Headquarters at Chennai with all the 30 District Headquarters as well as linking Districts Headquarters to the Divisional Headquarters, Taluk Headquarters and Block Headquarters. It will become reality to view and browse the details of land from any where with the help of computer.

Tamil Nadu Government G.O. (MS.) No.382

TAMIL NILAM - Computerisation of Land Records and other services - Delivery of on-line service - Validity of Computerised Land Records Extract issued in printout/hardcopy - Ban on issue of Manual extract of land records and use of hand written land records in rural areas - Orders - Issued.

REVENUE DEPARTMENT

G.O. (MS.) No.382

DT: 3.9.2003

Read:

- 1) G.O. (Ms) No.396, Revenue (SS.II (2)) Department, dated 19.10.2001.
- 2) G.O. (Ms) No.142, Revenue (SS.II (2)) Department, dated 27.3.2002.
- 3) From the Special Commissioner and Director of Survey and Settlement Lr.Rc.S2/40970/2001 (Sy), dated 3.6.2003.

ORDER:

On-line service under the Centrally Sponsored Scheme of Computerisation of Land Records Programme (CLR) Christened as TAMIL NILAM is in a very advanced stage in Tamil Nadu. TAMIL NILAM project envisages on-line issue of Computerised extract (ROR) of land records. Initially 29 Model Taluks in the State were brought on-line. Besides issue of computerised extracts of land records, the Public can access information on details of Old Age Pension/Destitute Pension, details of guideline

values and obtain birth and death certificates, etc. All the remaining Taluks are expected to be brought on-line with effect from 1.10.2003 onwards.

2) The implementation of the scheme envisages concept of on-line mutation in rural areas initially. It means that various types of mutations have to be carried out through the 'TAMIL NILAM' software. The mutations are to be initiated on Tamil NILAM by generating notices and then serving the same on interested parties. The only way to carry out changes on any details in computerised Land Records is to do the same through appropriate mutation. Any mutation carried out by-passing Tamil Nilam will not be recognised by Tamil NILAM and computerised land records in printouts/hard copy issued without carrying out mutation on-line will show only old and obsolete details which is not contemplated under the TAMIL NILAM project for issue of computerised extract of land records to the public. If the Revenue officials at Village and Taluk levels keep on issuing hand written land records and do mutation in the age old conventional way by-passing Tamil NILAM, then the Computerised land Records data will become redundant and no purpose will be served. It will also provide room for tampering of records. Issue of Record of Rights to the land owners in a fool proof manner through updation process shall be ensured by the Revenue officials at all levels so that updated Land Records can be issued to the land owners on-line in printout/hard copy.

3) The Government have, therefore, decided to ban issue of manual extract of land records and the use of hand written land records in all the Taluks in the State as and when the Taluks are brought on-line. Accordingly the Government direct that the issue of manual extract of land records and the use of hand written land records be banned in the taluks from the day on

which the taluks are brought on-line. The District Collectors are hereby instructed to issue directions to Tahsildars, sub-Registrars, Banks, Other Government institutions including the Public Sector undertakings, Boards and Corporations of both Government of India and State Government and all educational institutions, both Public and Private and also all other private establishments in the respective districts not to recognise handwritten land records hereafter in all their dealings with the Revenue Department, as the public are expected to obtain computerised extracts of land records for land transaction in respect of their lands and to carry out mutations on-line by issue of on-line patta transfer order, etc., in the context of the various connectivity aspects contemplated under the TAMIL NILAM project. A copy of such directions should be invariably sent by all the District Collectors to the Government for reference.

4. The Government also direct that any computerised land records, which have been modified, corrected manually shall not be valid. Similarly photocopy of computerised land records also shall not be valid and therefore, none of the Revenue officials shall issue photo copies of Land Records. The public should also be informed through Notice Board, Mass Media and during periodical Press meets by the District Collectors regarding the availability of on-line service in the Taluks of the District concerned and of the mandatory nature of the computerised extracts of land records.

5. The Government, however, consider that the manual extracts of the land records issued prior to the commencement of the issue of computerised extracts in the Taluks under TAMIL NILAM shall not be valid after the commencement of the issue of computerised extracts of land records. The public should obtain fresh computerised extracts of the land records by payment of

Rs.20/- as user charge in replacement of the manual extracts for their use in matters of land transactions etc., intended after the commencement of the issue of computerised extracts of land records in the respective Taluks. The District Collectors are instructed to issue necessary directions in this regard to all Tahsildars for displaying the same in the Notice Boards prominently in the Taluk office premises immediately on the commencement of the on-line services in the Taluks of the respective Districts. . The District Collectors/Tahsildars should ensure that extract of updated land records are issued to the public to avoid any ambiguity in the land transactions. Clear instructions should be issued by the Collector regarding authorised signatories for immediate authentication of the computersied extracts.

6. The Government also direct that the computerised extract issued under TAMIL NILAM Project for the use of public in matters other than land records shall also be valid for the purpose for which they are obtained by the Public/issued by the Revenue Department.

7. All the Heads of Departments are requested to instruct all the Subordinate Offices under their control suitably.

8. Necessary Notification shall be issued separately.

9. This order issues with the concurrence of the Finance Department vide its U.O.No.59/ADS (S.A.)/2003-1 dt.30.6.2003.
